Title: Proposal for Software Testing Project on CGI Visa Schedule Application

Introduction:

The purpose of this project is to apply testing methodologies and techniques learned in the course to a real-world software system. The selected system for this project is the CGI Visa Schedule Application, a widely used web-based platform that manages visa appointment scheduling for various embassies and consulates worldwide.

Scope: The testing activities will cover the main features of the system, including user registration, login, appointment scheduling, payment processing, and notifications.

Testing Techniques: The plan will incorporate Unit Testing, Exploratory Testing, Specification Testing, Boundary Testing, and Equivalence Testing to cover different aspects of the software quality assurance process.

Chosen Software System:

- **Name of the System:** CGI Visa Schedule Application
- **Type of System:** Web-based application
- **Purpose of the System:** The CGI Visa Schedule Application facilitates visa appointment scheduling, allowing users to create profiles, select appointment dates, and manage their application details.

Reasons for Selection:

- **Complexity:** The system's multi-component structure, including user authentication, calendar management, and secure data handling, provides a robust environment for thorough testing.
- **Relevance:** Testing a system with global implications aligns with the need for expertise in secure and scalable web applications.
- **Accessibility:** The web-based nature of the system ensures easy access for testing from various locations and devices.

Testing Objectives:

- Identify critical bugs, particularly those affecting user experience or security.
- Verify that the software meets functional requirements for visa scheduling.
- Assess the system's performance and usability under various conditions.

Proposed Testing Techniques:

- **Unit Testing:** Evaluate individual components like user authentication, scheduling logic, and data validation.
- **Boundary Testing:** Focuses on testing values at the boundaries of input ranges.
- **Equivalence Testing:** Involves partitioning inputs into groups where all elements are expected to behave similarly.
- **Functional Testing:** Validate that the application performs as expected across all functional areas, including appointment scheduling, user management, and data handling.

Software testing Project Portfolio
U70955896

- **Specification Testing:** Ensures that the application meets documented requirements.

Expected Outcomes:

- A comprehensive report identifying bugs, vulnerabilities, and areas for improvement.
- A detailed assessment of the system’s functional integrity.
- Performance analysis under simulated high-traffic conditions.
- Recommendations for enhancing system security, performance, and user experience.

1. Boundary Value Testing

1. Password Input Field

Boundary Value Testing focuses on testing the edges of input ranges, ensuring that the application handles both expected and edge-case values effectively.

Test Case ID	TC-BVT-001		
Component	Password Input Field		
Purpose of Test Case	To check the lower boundary for password length.		
Functional Test Type	Boundary Value Testing		
Pre-Condition	The application login page is loaded.		
Inputs	Password = 7 characters		
Expected Outputs	Error message: "Password must be at least 8 characters."		
Post-Condition	Error message displayed; login prevented.		
Execution History	Date	Result	Tester
	10/21/2024	Pass	Ruchitha Paccha

2.Password Input Field for upper filed

Test Case ID	TC-BVT-002		
Component	Password Input Field		
Purpose of Test Case	To check the upper boundary for password length.		
Functional Test Type	Boundary Value Testing		
Pre-Condition	The system requires a password that is 8 to 16 characters long and meets specific complexity requirements (combining at least 3 out of 4 categories: lowercase letters, uppercase letters, digits, and special characters). The user is on the "User Details" page with access to the password field.		
Inputs	Password = 20 characters		
Expected Outputs	An error message should be displayed indicating that the password exceeds the maximum length of 16 characters, and the user should not be able to proceed		
Post-Condition	The user cannot proceed until a valid password within the required length (8-16 characters) is entered.		
Execution History	Date	Result	Tester
	10/21/2024	Pass	Ruchitha Paccha

RELATED TEST CASE IDS: -

CONSISTENCY: medium

DEFECT SUMMARY:

The system allows the user to input a username containing invalid special characters (e.g., @, #,!), but no error message is displayed to inform the user that the username is invalid.

STEPS TO REPRODUCE

1. Navigate to the profile creation page.
2. Enter **Ruchithachowdary123@##!** as the username.
3. Click on the **Send Verification Code** button.

COMMENTS:

- Implement validation for special characters in the username field to prevent this issue.
- Consider enhancing user feedback by providing specific error messages.

ATTACHMENTS:

The screenshot shows a web form titled "Apply for a U.S. Visa". On the left, there are sections for "Terms and Conditions" and "New Users on this portal:". On the right, the "User Details" section contains input fields for Username, New Password, Confirm New Password, Email Address, and Given Name. The Username field is populated with "Ruchithachowdary123@##!". Below the password fields, there is a message: "Verification is necessary. Please click Send Verification Code button." and a blue button labeled "Send Verification Code". The Email Address field contains "paccharuchitha@gmail.com" and the Given Name field contains "ruchitha".

Screenshot shows Username Field Without Error Notification

7. Validate Username with Only Numbers

Test Case ID	TC-BVT-007
Component	Username Field
Purpose of Test Case	Verify that the system allows a username with only numbers.
Functional Test Type	Boundary Value Testing
Pre-Condition	<ul style="list-style-type: none">• The profile creation page of the visa scheduling application is loaded.

RELATED TEST CASE IDS: -

CONSISTENCY: medium

DEFECT SUMMARY:

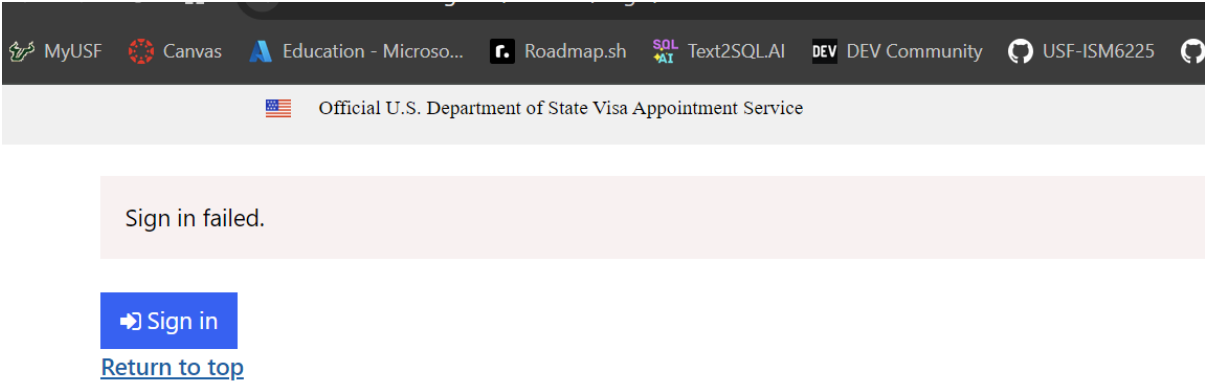

The "Sign in failed" error message is displayed even when valid login credentials are provided. The user is unable to access the system despite using the correct username and password.

STEPS TO REPRODUCE

- Open the Visa Application Web Interface login page.
- Enter a valid username and password (e.g., Username: validUser, Password: CorrectPassword123).
- Click the "Sign in" button.
- Observe the error message "Sign in failed" displayed on the screen.

- The issue occurs consistently for valid login credentials.
- The defect could be related to server-side authentication, account status, or security policies.
- Investigating server logs and backend authentication services is recommended.

ATTACHMENTS:

Screenshot showing the "Sign in failed" error message after attempting to log in with valid credentials.

20. Verify Document Upload Format

Test Case ID	TC-ECT-010
Component	Document Upload
Purpose of Test Case	Verify that the system accepts supported document formats and rejects unsupported ones.
Functional Test Type	Equivalence Class Testing

Software testing Project Portfolio
U70955896

Pre-Condition	The document upload feature is accessible.		
Inputs	<ul style="list-style-type: none">• File: "passport.pdf" (Valid format)• File: "image.bmp" (Invalid format)		
Expected Outputs	The system accepts the "passport.pdf" file for upload. The system rejects the "image.bmp" file and displays a message indicating the unsupported file format.		
Post-Condition	Only supported formats (e.g., .pdf, .jpg) are accepted for document uploads.		
Execution History	Date	Result	Tester
	10/21/2024	Pass	Ruchitha Paccha

Unit Testing

21. Application Creation Process

Test Case ID	TC- UT-001		
Component	Application Creation Process		
Purpose of Test Case	Verify that a new application is successfully created when valid input data is provided.		
Functional Test Type	unit Testing		
Pre-Condition	User is logged into the system. All required fields are available and correctly filled out.		
Inputs	Valid input data for all required fields (e.g., name, email, username, etc.). Submit the application creation form.		
Expected Outputs	A success message: "Application successfully created." The user is redirected to the dashboard or application details page.		
Post-Condition	The new application is listed in the user's application dashboard. The system should store the new application data correctly in the database.		
Execution History	Date	Result	Tester
	10/21/2024	Pass	Ruchitha Paccha

22.Email Notification on Appointment Confirmation

Test Case ID	TC- UT-002		
Component	Send Confirmation Email		
Purpose of Test Case	To verify that an email notification is sent when an appointment is confirmed.		
Functional Test Type	unit Testing		
Pre-Condition	User successfully schedules an appointment.		
Inputs	Appointment ID: "APPT123"		
Expected Outputs	A confirmation email is sent to the user's registered email address.		

Software testing Project Portfolio
U70955896

Post-Condition	Email is received, and the appointment is confirmed.		
Execution History	Date	Result	Tester
	10/21/2024	Pass	Ruchitha Paccha

23. Calendar Fetch

Test Case ID	TC- UT-003		
Component	fetch Available Dates		
Purpose of Test Case	To verify that available appointment dates are fetched from the database and displayed.		
Functional Test Type	unit Testing		
Pre-Condition	User is on the appointment scheduling page.		
Inputs	N/A (dates fetched from the database).		
Expected Outputs	A list of available dates is displayed for the user to select.		
Post-Condition	Available dates are correctly displayed.		
Execution History	Date	Result	Tester
	10/21/2024	Pass	Ruchitha Paccha

24. Reset Password Functionality

Test Case ID	TC- UT-004		
Component	reset Password		
Purpose of Test Case	To test the reset password feature when a user requests to reset their password		
Functional Test Type	unit Testing		
Pre-Condition	User provides their email for resetting the password		
Inputs	Email: "paccharuchitha@gmail.com"		
Expected Outputs	A reset password link is sent to the provided email address.		
Post-Condition	The user receives the email and can reset the password.		
Execution History	Date	Result	Tester
	10/21/2024	Pass	Ruchitha Paccha

25. User Logout

Test Case ID	TC- UT-005		
Component	Logout Functionality		

Software testing Project Portfolio

U70955896

Purpose of Test Case	To verify that the user can log out successfully.		
Functional Test Type	unit Testing		
Pre-Condition	The user is logged into the system.		
Inputs	User clicks on the "Logout" button.		
Expected Outputs	<ul style="list-style-type: none"> The user is logged out successfully. The session is terminated. The user is redirected to the login page. 		
Post-Condition	The session is cleared, and the user cannot access protected pages without logging in again.		
Execution History	Date	Result	Tester
	10/21/2024	Pass	Ruchitha Paccha

26.Session Timeout Functionality

Test Case ID	TC- UT-006		
Component	Session Management		
Purpose of Test Case	To verify that user sessions expire after the set timeout period.		
Functional Test Type	unit Testing		
Pre-Condition	<ul style="list-style-type: none"> The user is logged in. The session timeout is set to 30 minutes. 		
Inputs	User inactivity for 30 minutes.		
Expected Outputs	The session expires, and the user is logged out automatically.		
Post-Condition	The user is redirected to the login page.		
Execution History	Date	Result	Tester
	10/21/2024	Pass	Ruchitha Paccha

27.Missing "Start Application" Button and Other Navigation Options

Test Case ID	TC- UT-007		
Component	U.S. Visa Application Web Interface		
Purpose of Test Case	To verify that all navigation buttons (e.g., "Start Application," "Create Group Request," "Messages") are visible and functional after the user logs in.		
Functional Test Type	unit Testing User Interface (UI) Testing		
Pre-Condition	<ul style="list-style-type: none"> The user must have valid login credentials. The web application should be accessible. Browser should be up to date (e.g., Chrome, Firefox). 		
Inputs	<ul style="list-style-type: none"> Open the U.S. Visa Application page in a web browser. Log in using valid user credentials. 		

Software testing Project Portfolio
U70955896

Expected Outputs	All navigation buttons ("Start Application," "Create Group Request," "Messages") should be visible on the left-hand sidebar and fully functional.		
Post-Condition	The user should be able to proceed with the visa application or other processes using the available navigation buttons.		
Execution History	Date	Result	Tester
	10/21/2024	Fail	Ruchitha Paccha

DEFECT SUMMARY:

Software testing Project Portfolio

U70955896

The system incorrectly displays a "Limit Reached" error when users attempt to schedule an appointment for the very first time. This prevents users from scheduling their appointments, effectively blocking them from proceeding with the visa application process.

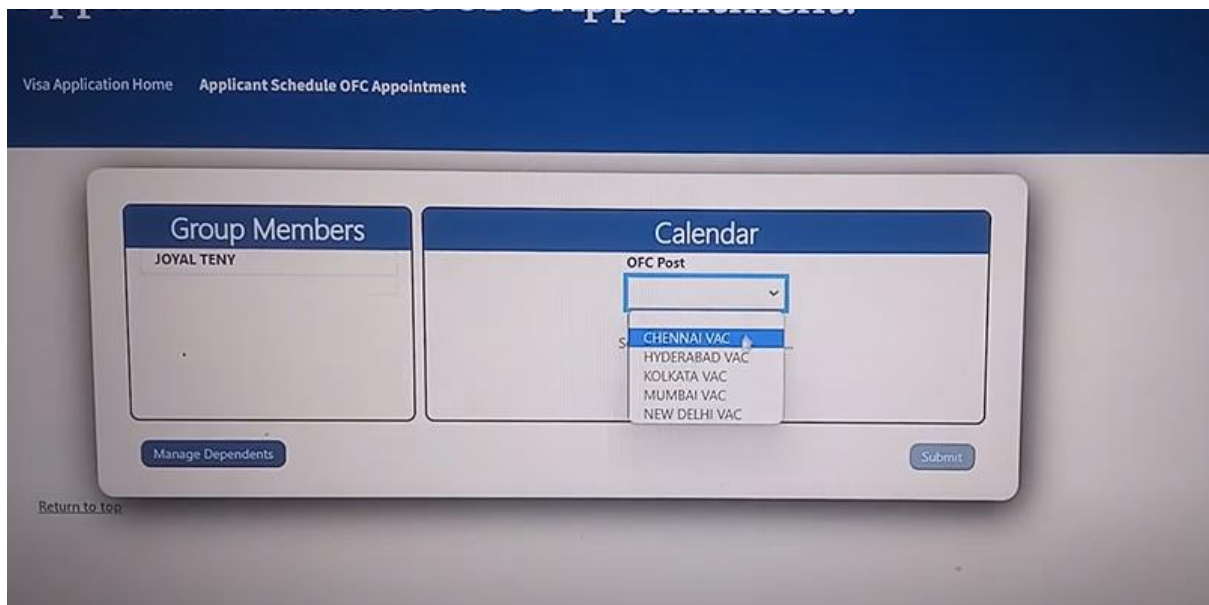

STEPS TO REPRODUCE:

- Open the U.S. Visa Application website.
- Log in using valid credentials.
- Attempt to schedule an appointment for the first time.
- Observe that the system displays a "Limit Reached" error despite it being the user's first scheduling attempt.

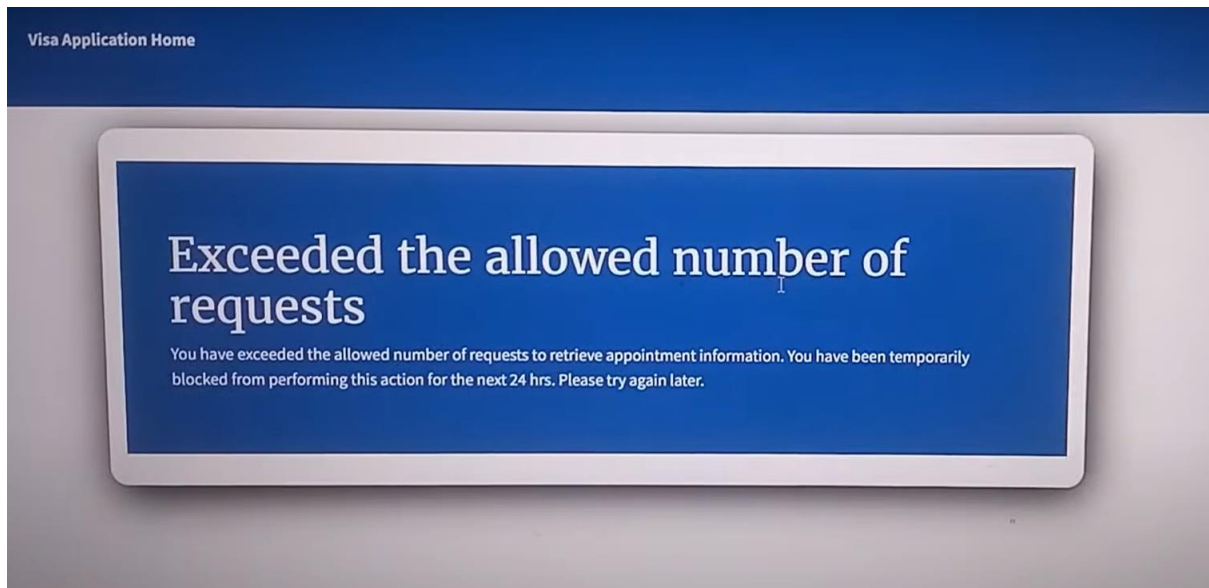

COMMENTS:

This issue critically impacts the user experience and should be resolved urgently, as it blocks users from scheduling visa appointments on their first attempt.

DEFECT ID: 007

TITLE: "Submit" Button Fails to Respond Consistently on Appointment Scheduling Page
COMPONENT: Visa Application Web Interface

REPORTED BY: Paccha Ruchitha

SUBCOMPONENT: User Interface

REPORTED ON: 10/22/2024

VERSION:

PLATFORM: Web Browser (specify the browser, e.g., Google Chrome, Firefox, etc.)

RESOLUTION PRIORITY: p2

OPERATING SYSTEM: pc

RESOLUTION SEVERITY: s2

RELATED TEST CASE IDS:

CONSISTENCY: medium

DEFECT SUMMARY:

The "Submit" button intermittently fails to respond when users attempt to schedule a U.S. visa appointment. This inconsistency prevents users from successfully submitting their appointment request, leading to frustration and a potential loss of progress.

STEPS TO REPRODUCE:

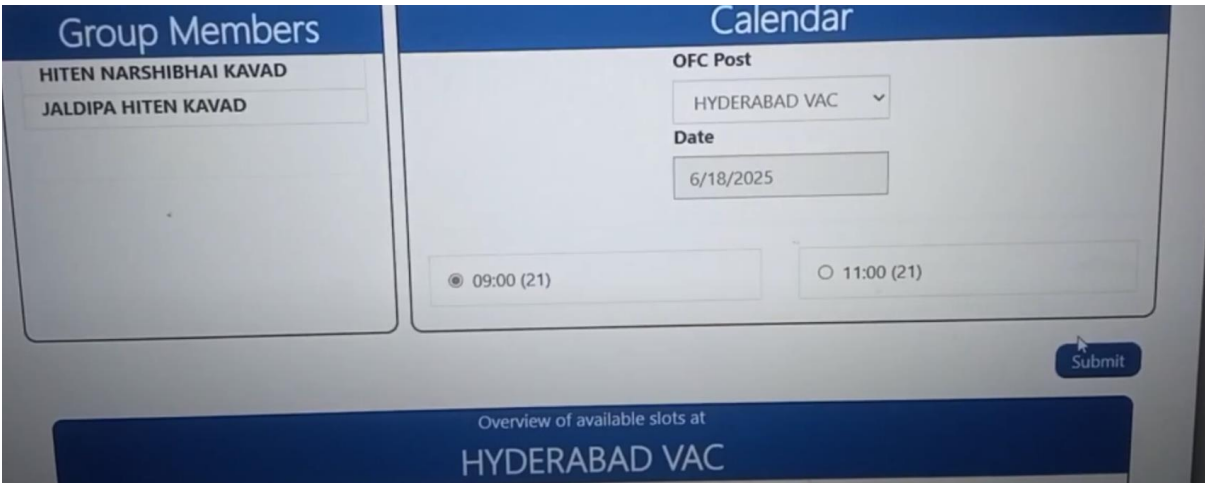

- Open the U.S. Visa Application website.
- Log in using valid credentials.
- Fill in all required information to schedule an appointment.
- Click the "Submit" button.
- Observe that the button sometimes does not respond, or the submission does not proceed, with no error or feedback provided to the user.

COMMENTS:

This issue impacts the user experience by preventing successful submission of appointment scheduling requests, leading to delays and potential loss of appointments.

DEFECT ID: 009

TITLE: Calendar Loading Issue in Visa Application Web Interface
COMPONENT: Visa Application Web Interface

REPORTED BY: Paccha Ruchitha **SUBCOMPONENT:** Calendar Appointment System

REPORTED ON: 10/22/2024 **VERSION:**

PLATFORM: Web Browser (specify the browser, e.g., Google Chrome, Firefox, etc.)
RESOLUTION PRIORITY: p2

OPERATING SYSTEM: **RESOLUTION SEVERITY:** s2

RELATED TEST CASE IDS: **CONSISTENCY:**

DEFECT SUMMARY:

The "Calendar" section of the Visa Application Web Interface fails to load available appointment dates when "Chennai" is selected in the "Consular Posts" dropdown. The "Date" field remains stuck on "Loading...", preventing users from scheduling appointments.

STEPS TO REPRODUCE:

Software testing Project Portfolio
U70955896

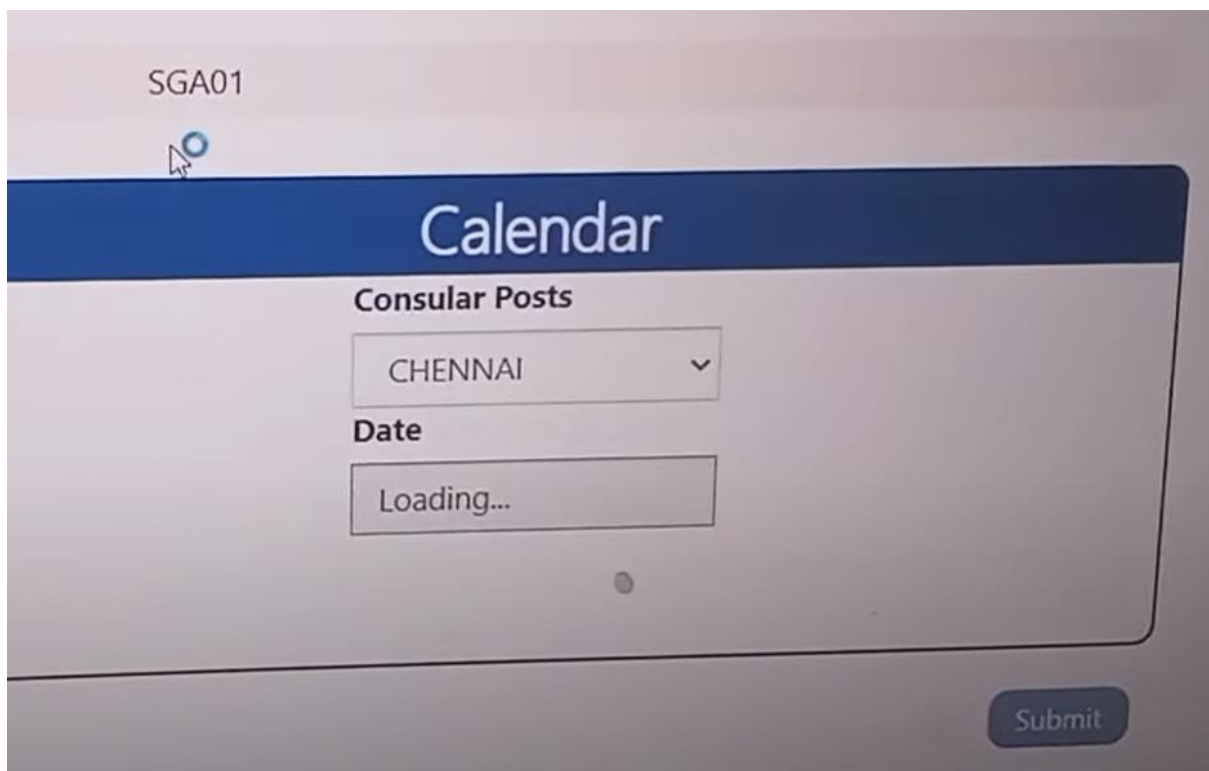

- **Log in to the Visa Application Web Interface.**
- **Navigate to the "schedule appointment" section.**
- **Select "Chennai" from the "Consular Posts" dropdown.**
- **Observe the "Date" field, which remains in a "Loading..." state without displaying available dates.**

COMMENTS:

The issue may be related to backend server response times, client-side JavaScript errors, or network connectivity.

Further investigation is needed to determine if other consular posts are affected.

49.Missing the OFC details, and only the VI information is displayed.

Test Case ID	TC-SBT-009		
Component	Appointment Scheduling		
Purpose of Test Case	Verify that the appointment confirmation displays both OFC (Offsite Facilitation Center) and VI (Visa Interview) details.		
Functional Test Type	Specification-Based Testing		
Pre-Condition	The user has successfully scheduled an appointment with dates for both OFC and VI.		
Inputs	• Schedule an appointment with available dates for both OFC and VI.		
Expected Outputs	• The appointment confirmation should display details for both OFC and VI, including date, time, and location.		
Post-Condition	The user is unable to see the OFC appointment details, which may cause confusion.		
Execution History	Date	Result	Tester
	10/21/2024	Fail	Ruchitha Paccha

DEFECT ID: 010

TITLE: Missing OFC Details in Appointment Confirmation

COMPONENT: Appointment Scheduling

REPORTED BY: Paccha Ruchitha
System

SUBCOMPONENT: Calendar Appointment

REPORTED ON: 10/22/2024

VERSION:

PLATFORM: Web Browser (specify the browser, e.g., Google Chrome, Firefox, etc.)

RESOLUTION PRIORITY: p2

OPERATING SYSTEM: pc

RESOLUTION SEVERITY: s2

RELATED TEST CASE IDS:

CONSISTENCY:

DEFECT SUMMARY:

The appointment confirmation page displays only the Visa Interview (VI) details, but the Offsite Facilitation Center (OFC) details are missing. Both OFC and VI information should be included in the appointment confirmation.

STEPS TO REPRODUCE:

- Log in to the Visa Scheduling portal and schedule an appointment.

Software testing Project Portfolio

U70955896

- Select an available date for the OFC and VI appointments.
- Proceed to the confirmation page after scheduling.
- Observe that the confirmation only shows the VI details, and the OFC details are missing.

COMMENTS:

- This issue may cause confusion for applicants who need to visit both the OFC and the consulate for the visa interview.
- The problem appears consistently across different appointments.

ATTACHMENTS:

Screenshot showing the appointment confirmation page with only the VI details.

50. Heavy Load Impact on Visa Scheduling Portal

Test Case ID	TC-SBT-010
Component	Appointment Scheduling
Purpose of Test Case	when booking the new appointment in between showing that the "waiting room" message is displayed when the portal experiences heavy load.
Functional Test Type	Specification-Based Testing
Pre-Condition	The Visa Scheduling portal is accessed during a known peak traffic period.
Inputs	Attempt to access the Visa Scheduling portal during peak hours (e.g., when new appointments are released).

Software testing Project Portfolio
U70955896

Expected Outputs	• The "waiting room" message is displayed, informing the user that they will be redirected shortly.		
Post-Condition	Users are unable to access the system during peak traffic.		
Execution History	Date	Result	Tester
	10/21/2024	Fail	Ruchitha Paccha

DEFECT ID: 011

TITLE: System Delays Due to Heavy Load on Visa Scheduling Portal
COMPONENT: Visa Scheduling Portal

REPORTED BY: Paccha Ruchitha **SUBCOMPONENT:** Appointment Scheduling System

REPORTED ON: 10/22/2024 **VERSION:**

PLATFORM: Web Browser (specify the browser, e.g., Google Chrome, Firefox, etc.)
RESOLUTION PRIORITY: p2

OPERATING SYSTEM: pc **RESOLUTION SEVERITY:** s2

RELATED TEST CASE IDS: **CONSISTENCY:**

DEFECT SUMMARY:

The system displays a "waiting room" message indicating high traffic or system maintenance. Users are placed in a queue and have to wait before they can access the Visa Scheduling portal. This issue may cause significant delays, especially during peak usage times, such as when new appointment slots are released.

STEPS TO REPRODUCE:

- Attempt to access the U.S. Visa Scheduling portal during peak times, such as when many users are expected to log in.
- Observe that a "waiting room" message appears, stating that users will be redirected to the portal shortly.
- The system may take an extended time to redirect users due to the heavy load.

COMMENTS:

Software testing Project Portfolio
U70955896

- The waiting room is used to manage high traffic and prevent the system from crashing, but it may lead to long wait times for users.
- The load-balancing mechanism should be optimized to reduce the impact on user experience

ATTACHMENTS:

Test Stage:	<input type="checkbox"/> Unit <input type="checkbox"/> Functionality <input type="checkbox"/> Integration <input type="checkbox"/> System <input type="checkbox"/> Interface <input type="checkbox"/> Performance <input type="checkbox"/> Regression <input type="checkbox"/> Acceptance <input type="checkbox"/> Pilot Functionality and unit test code: Selenium IDE script for automating registration form testing.		
Test Date:	23/10/2024	System Date, if applicable:	NA
Tester:	ruchitha	Test Case Number:	TC_001
Test Case Description:	Verify the user registration process, including username, password, email ID, and security question setup.		
Results:	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	Incident Number, if applicable:	NA

Software testing Project Portfolio
U70955896

INTRODUCTION	
Requirement(s) to be tested:	Validate that the registration functionality allows new users to create an account by entering a username, password, email, and answering security questions.
Roles and Responsibilities:	The tester will design the test case and execute it using Selenium IDE to verify that all form fields are functioning correctly, and the form can be submitted without errors.
Set Up Procedures:	<ul style="list-style-type: none">• Navigate to the CGI Visa Scheduling portal.• Ensure the "Sign Up" page is accessible.• Submit the form.
Stop Procedures:	If the registration form fails to load, stop testing and report the issue. If registration cannot be completed due to an unexpected error, log the defect and halt further testing.
ENVIRONMENTAL NEEDS	
Hardware:	Laptop/PC with internet access.
Software:	<ul style="list-style-type: none">• Selenium IDE for test case execution• Web browser (Chrome or Firefox)
Procedural Requirements:	Ensure a stable internet connection and that the web application is up and running.
TEST	
Test Items and Features:	User registration functionality. Form validation for fields: Username, Password, Email, and Security Question.
Input Specifications:	<ol style="list-style-type: none">1. Username: Ruchitha2. Password: Ruchitha@1233. Email: [user@example.com]4. Security Question: Select a question and provide an appropriate response.
Procedural Steps:	<ol style="list-style-type: none">1. Navigate to the registration page on the CGI Visa Scheduling portal.2. Click on the "Sign Up" button.3. Enter the username as "Ruchitha".4. Type the password as "Ruchitha@123" and confirm it.5. Enter the email ID.6. Select and answer a security question.

Software testing Project Portfolio

U70955896

	7. Submit the registration form.
Expected Results of Case:	<ul style="list-style-type: none"> The form is submitted successfully. The user is redirected to a confirmation page or receives a success message confirming account creation.
ACTUAL RESULTS	
Output Specifications:	The form was submitted successfully, and the user was able to create an account without any errors. The test passed as expected.

Conclusion:

In conclusion, the testing of the CGI Visa Scheduling application revealed several critical issues affecting the user experience, including navigation problems, inconsistent form behaviors, and loading delays. By applying various testing techniques, such as unit testing, boundary testing, and exploratory testing, the project successfully identified areas that require improvement to ensure the system's reliability and usability. Addressing these issues will significantly enhance the platform's stability, providing a smoother and more efficient experience for visa applicants. Overall, the project highlighted the importance of thorough testing to maintain the quality and effectiveness of web-based applications.
